ABSTRACTED-PUB-NO: JP68013458B

BASIC-ABSTRACT: A process for preparing steroid phosphates which comprises reacting a steroid having one or more phenolic hydroxyl groups with tetrachloropyro phosphoric acid in the presence of a tertiary amine, followed by hydrolysis of the reaction product.

Various, depending on the steroid. Oestradiol 3,17-diphosphate and Oestriol 3-phosphate (acid or salt forms) have oestrogenic and haemostatic activities, and an inhibitory and curing action on prostatic cancer.

Simple process giving almost quantitative yields of steroid phosphate.
